

Recuperando sistema

Os principais erros apontados dentro do sistema são: A falta do **repository** que resulta em uma perda de acesso ao banco de dados e a algumas documentações, a falta dele interrompe toda a ligação do projeto causando erro, pois todas as camadas estão interligadas, também notamos a falta do **application.properties** que impede a conexão do banco de dados a um servidor e por último erro é a falta de importação da interface “**jdbc**” dentro do pom.

Usaremos como método de recuperação o github com backup, sendo assim o projeto revisado e modificado corretamente.
